Tutorial Day

2-View Geometry

Mark Fiala
Ryerson University
Mark.fiala@ryerson.ca

2D Homogeneous Points

- Add 3rd number to a 2D point on image plane (add 1)
- Extend $[u,v]^t$ to $[u,v,1]^t$
- 2D point is now represented by 3D line, can multiply entire vector by a constant and it's still the same point

$$k[u,v,1]^t = [ku,kv,k]^t = [u,v,1]^t$$

2D Projective Geometry

- Point is represented by 3D line passing through origin
(2D point \rightarrow 3D vector)
 $p=k[u,v,1]^t$
- Image plane is horizontal plane at $z=1$
- Image point is where 3D line passes through image plane
- Image line represented by where 3D plane passes through image plane
- 3D plane passes through origin, defined by normal (perpendicular) 3D vector $L=[a,b,c]^t$
- Standard line definition: $ax+by+c=0$
- Line defined as vectors perpendicular to vector L (dot product=0)

$$L^t p = 0$$

3-Vectors – scale does not matter

- Image point: $[u,v,1]^t$
- Image line: $[a,b,c]^t$

Two View Geometry

- When you have two images, what **relations** can you find between them?
- A **homography** matrix maps a point in one image to a point in another, but only under special cases:
 - 1-both looking at the same plane (any R or T allowed) – can do planar mosaic
 - 2-only rotation R, no translation T –can do panoramic mosaic
- Is there anything we can do for two arbitrary images – with unknown R & T that are not aimed at a plane?

Point->Line Mapping

- With any configuration with $T \neq 0$ we can find a point-to-line mapping
- A point in one image maps to a line in another image
- For a single camera, all points along a line in 3D space fall onto a single image point. Project all those points onto another camera, they appear as a line emanating from the image of the focal point of the first camera.
- Imagine a laser beam “shooting” out of Cam_1 , see the laser beam in second camera Cam_2 –will appear as a line.
- Therefore a point p_1 in Cam_1 maps to a line l_2 in Cam_2
- What is the relation?

Answer $l_2 = Fp_1$ F is the **fundamental matrix** (3x3)
- Since $l^t p = p^t l = 0$ for points p lying on line l, we can say an object at p_1 in Cam_1 must lie upon l_2 Cam_2 –therefore $p_2^t F p_1 = 0$

Matrices, World-Image and Image-Image Relationships

Projection Matrix

$$p = PX$$

- Homogeneous point p as a function of world coords X
- Size $P=3 \times 4$, not invertible (cannot go from image point to world point)

Homography Matrix

$$p = HX \quad \text{or} \quad p_2 = Hp_1$$

- Homogeneous point p as a function of world planar coords X
- Or rotating but not translating camera, Homogeneous points p_1, p_2
- Point in one image maps to point in other image via H
- Size $H=3 \times 3$, invertible (can go from image point to world planar point)

Fundamental Matrix

$$p_2^t F p_1 = 0$$

- Line $l_2 = Fp_1$ as a function of homogeneous point p_1
- Size $F=3 \times 3$, not invertible (cannot go from point back to line, F contains T_x matrix, $\det(T_x)=0$, cannot be inverted)

3-View Tensor

$$p_3 = T(p_1, p_2)$$

- Homogeneous point p_3 in 3rd image as a function of homogeneous point p_1 in first image and p_2 in second image
- Works for arbitrary R and T between cameras, world not restricted to planar case
- Size tensor = $3 \times 3 \times 3$ (27 numbers)

Entities where scale doesn't matter

- All the following are independent of scale: each is represented by one more number than the degrees of freedom

Homogeneous point (2D point->3D line)

- 3 numbers, 2 dof (degrees of freedom)

$$p = k[u, v, 1]^t$$

Line

- 3 numbers, 2 dof

$$l = k[a, b, c]^t$$

Projection Matrix

- Homogeneous point p as a function of world coords X
- 12 numbers, 11 dof

$$p = PX$$

Homography Matrix

- Map a homogeneous point between a plane and image, or between rotated images
- 9 numbers, 8 dof

$$p = HX \quad \text{or} \quad p_2 = Hp_1$$

Fundamental Matrix

- Line $l_2 = Fp_1$ as a function of homogeneous point p_1
- 9 numbers, 8 dof

$$p_2^t F p_1 = 0$$

3-View Tensor

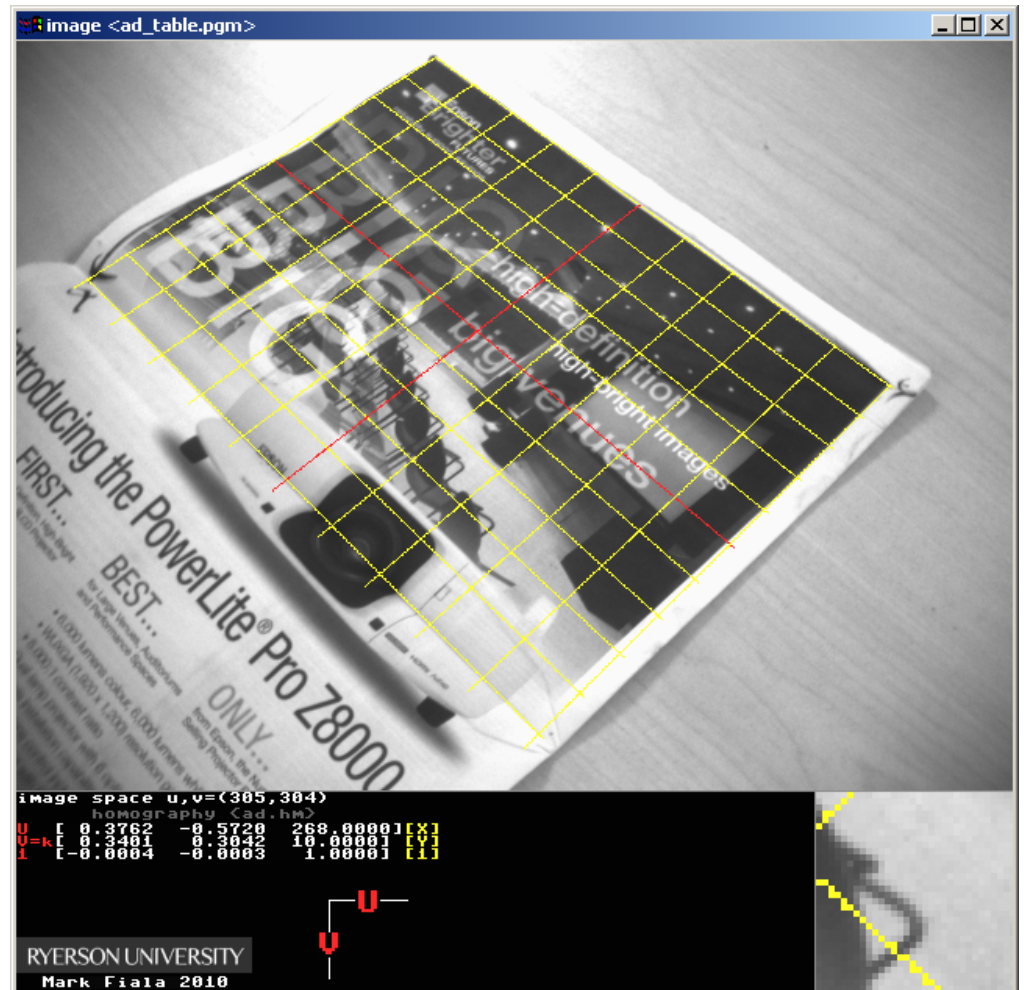

- Homogeneous point p_3 in 3rd image as a function of homogeneous point p_1 in first image and p_2 in second image
- 27 numbers, 26 dof

$$p_3 = T(p_1, p_2)$$

view_homog_matrix.exe

H =

```
0.3762    -0.5720    268.0000
0.3401     0.3042    10.0000
-0.0004    -0.0003     1.0000
```

Recover Homography matrix from correspondences

$$\begin{bmatrix} u_2 \\ v_2 \\ w_2 \end{bmatrix} = \begin{bmatrix} H_{11} & H_{12} & H_{13} \\ H_{21} & H_{22} & H_{23} \\ H_{31} & H_{32} & H_{33} \end{bmatrix} \begin{bmatrix} u_1 \\ v_1 \\ w_1 \end{bmatrix}$$

$$\mathbf{u}_2 = \frac{H_{11} u_1 + H_{12} v_1 + H_{13} w_1}{H_{31} u_1 + H_{32} v_1 + H_{33} w_1}$$

$$\mathbf{v}_2 = \frac{H_{21} u_1 + H_{22} v_1 + H_{23} w_1}{H_{31} u_1 + H_{32} v_1 + H_{33} w_1}$$

Multiply up denominators

$$H_{31} \mathbf{u}_1 \mathbf{u}_2 + H_{32} \mathbf{v}_1 \mathbf{u}_2 + H_{33} \mathbf{u}_2 = H_{11} \mathbf{u}_1 + H_{12} \mathbf{v}_1 + H_{13} w_1$$

$$H_{31} \mathbf{u}_1 \mathbf{v}_2 + H_{32} \mathbf{v}_1 \mathbf{v}_2 + H_{33} \mathbf{v}_2 = H_{21} \mathbf{u}_1 + H_{22} \mathbf{v}_1 + H_{23} w_1$$

Solving for $A\mathbf{x}=0$ -gives us 2 equations/correspondence –need 4 correspondences

$$H_{31} \mathbf{u}_1 \mathbf{u}_2 + H_{32} \mathbf{v}_1 \mathbf{u}_2 + H_{33} \mathbf{u}_2 - H_{11} \mathbf{u}_1 - H_{12} \mathbf{v}_1 - H_{13} w_1 = 0$$

$$H_{31} \mathbf{u}_1 \mathbf{v}_2 + H_{32} \mathbf{v}_1 \mathbf{v}_2 + H_{33} \mathbf{v}_2 - H_{21} \mathbf{u}_1 - H_{22} \mathbf{v}_1 - H_{23} w_1 = 0$$

Each correspondence provides two rows of A matrix

$$\begin{bmatrix} -\mathbf{u}_1 & -\mathbf{v}_1 & -1 & 0 & 0 & 0 & \mathbf{u}_1 \mathbf{u}_2 & \mathbf{v}_1 \mathbf{u}_2 & \mathbf{u}_2 \\ 0 & 0 & 0 & -\mathbf{u}_1 & -\mathbf{v}_1 & -1 & \mathbf{u}_1 \mathbf{v}_2 & \mathbf{v}_1 \mathbf{v}_2 & \mathbf{v}_2 \end{bmatrix} \begin{bmatrix} H_{11} \\ H_{12} \\ H_{13} \\ \dots \end{bmatrix}$$

Recover Homography matrix from correspondences

Each correspondence provides two rows of A matrix

$$\begin{bmatrix} -\mathbf{u}_1 & -\mathbf{v}_1 & -1 & 0 & 0 & 0 & \mathbf{u}_1\mathbf{u}_2 & \mathbf{v}_1\mathbf{u}_2 & \mathbf{u}_2 \\ 0 & 0 & 0 & -\mathbf{u}_1 & -\mathbf{v}_1 & -1 & \mathbf{u}_1\mathbf{v}_2 & \mathbf{v}_1\mathbf{v}_2 & \mathbf{v}_2 \end{bmatrix}$$

8 equations, 9 unknowns (from 4 correspondences)

$$\begin{bmatrix} -\mathbf{u}_{11} & -\mathbf{v}_{11} & -1 & 0 & 0 & 0 & \mathbf{u}_{11}\mathbf{u}_{21} & \mathbf{v}_{11}\mathbf{u}_{21} & \mathbf{u}_{21} \\ 0 & 0 & 0 & -\mathbf{u}_{11} & -\mathbf{v}_{11} & -1 & \mathbf{u}_{11}\mathbf{v}_{21} & \mathbf{v}_{11}\mathbf{v}_{21} & \mathbf{v}_{21} \\ -\mathbf{u}_{12} & -\mathbf{v}_{12} & -1 & 0 & 0 & 0 & \mathbf{u}_{12}\mathbf{u}_{22} & \mathbf{v}_{12}\mathbf{u}_{22} & \mathbf{u}_{22} \\ 0 & 0 & 0 & -\mathbf{u}_{12} & -\mathbf{v}_{12} & -1 & \mathbf{u}_{12}\mathbf{v}_{22} & \mathbf{v}_{12}\mathbf{v}_{22} & \mathbf{v}_{22} \\ -\mathbf{u}_{13} & -\mathbf{v}_{13} & -1 & 0 & 0 & 0 & \mathbf{u}_{13}\mathbf{u}_{23} & \mathbf{v}_{13}\mathbf{u}_{23} & \mathbf{u}_{23} \\ 0 & 0 & 0 & -\mathbf{u}_{13} & -\mathbf{v}_{13} & -1 & \mathbf{u}_{13}\mathbf{v}_{23} & \mathbf{v}_{13}\mathbf{v}_{23} & \mathbf{v}_{23} \\ -\mathbf{u}_{14} & -\mathbf{v}_{14} & -1 & 0 & 0 & 0 & \mathbf{u}_{14}\mathbf{u}_{24} & \mathbf{v}_{14}\mathbf{u}_{24} & \mathbf{u}_{24} \\ 0 & 0 & 0 & -\mathbf{u}_{14} & -\mathbf{v}_{14} & -1 & \mathbf{u}_{14}\mathbf{v}_{24} & \mathbf{v}_{14}\mathbf{v}_{24} & \mathbf{v}_{24} \end{bmatrix} \begin{bmatrix} H_{11} \\ H_{12} \\ H_{13} \\ H_{21} \\ H_{22} \\ H_{23} \\ H_{31} \\ H_{32} \\ H_{33} \end{bmatrix} = \mathbf{0}$$

See matlab_lec9_solve_for_homog_matrix.txt

view_fund_matrix.exe

- view_homog_matrix.zip on course and Dr. Fiala webpage
- Point in left image (red cross, white arrow) maps to red line in right image
- Notice corner of shelves (red cross in left image) lies on line in right image
- Blue crosses are epipoles = projection of focal point of other camera
- Transpose of fundamental matrix is the reverse fundamental matrix mapping points in right image to lines in left (unlike reverse=matrix inverse with homographies)

view_fund_matrix.exe

- Space bar turns on grid mode – shows epipolar lines
- Epipolar lines radiate from epipoles

Fundamental matrix for rectified images

- To do 'proper' stereo disparity, we needed rectified images
- images where a point (x_1, y) in the 1st image appears at (x_2, y) in the 2nd image (y is the same)
- Fundamental matrix is:

$$\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & -1 \\ 0 & 1 & 0 \end{bmatrix}$$

Recover Fundamental matrix from correspondences

$$\begin{bmatrix} u_2 & v_2 & 1 \end{bmatrix} \begin{bmatrix} F_{11} & F_{12} & F_{13} \\ F_{21} & F_{22} & F_{23} \\ F_{31} & F_{32} & F_{33} \end{bmatrix} \begin{bmatrix} u_1 \\ v_1 \\ 1 \end{bmatrix} = \mathbf{0}$$

Solving for $AX=0$ -gives us 1 equation/correspondence –need 8 correspondences

$$\begin{aligned} & F_{11} \mathbf{u}_1 \mathbf{u}_2 & + F_{12} \mathbf{v}_1 \mathbf{u}_2 & + F_{13} \mathbf{u}_2 \\ + & F_{21} \mathbf{u}_1 \mathbf{v}_2 & + F_{22} \mathbf{v}_1 \mathbf{v}_2 & + F_{23} \mathbf{v}_2 \\ + & F_{31} \mathbf{u}_1 & + F_{32} \mathbf{v}_1 & + F_{33} = 0 \end{aligned}$$

Each correspondence provides one rows of A matrix –need 8 correspondences

$$\begin{bmatrix} \mathbf{u}_1 \mathbf{u}_2 & \mathbf{v}_1 \mathbf{u}_2 & \mathbf{u}_2 & \mathbf{u}_1 \mathbf{v}_2 & \mathbf{v}_1 \mathbf{v}_2 & \mathbf{v}_2 & \mathbf{u}_1 & \mathbf{v}_1 & \mathbf{1} \end{bmatrix} \begin{bmatrix} F_{11} \\ F_{12} \\ F_{13} \\ F_{21} \\ F_{22} \\ \dots \end{bmatrix}$$

Recover Fundamental matrix from correspondences

Each correspondence provides one row of A matrix

$$[\mathbf{u}_1\mathbf{u}_2 \quad \mathbf{v}_1\mathbf{u}_2 \quad \mathbf{u}_2 \quad \mathbf{u}_1\mathbf{v}_2 \quad \mathbf{v}_1\mathbf{v}_2 \quad \mathbf{v}_2 \quad \mathbf{u}_1 \quad \mathbf{v}_1 \quad \mathbf{1}]$$

8 equations, 9 unknowns (from 8 correspondences)

$$\begin{bmatrix} \mathbf{u}_{11}\mathbf{u}_{21} & \mathbf{v}_{11}\mathbf{u}_{21} & \mathbf{u}_{21} & \mathbf{u}_{11}\mathbf{v}_{21} & \mathbf{v}_{11}\mathbf{v}_{21} & \mathbf{v}_{21} & \mathbf{u}_{11} & \mathbf{v}_{11} & \mathbf{1} \\ \mathbf{u}_{12}\mathbf{u}_{22} & \mathbf{v}_{12}\mathbf{u}_{22} & \mathbf{u}_{22} & \mathbf{u}_{12}\mathbf{v}_{22} & \mathbf{v}_{12}\mathbf{v}_{22} & \mathbf{v}_{22} & \mathbf{u}_{12} & \mathbf{v}_{12} & \mathbf{1} \\ \mathbf{u}_{13}\mathbf{u}_{23} & \mathbf{v}_{13}\mathbf{u}_{23} & \mathbf{u}_{23} & \mathbf{u}_{13}\mathbf{v}_{23} & \mathbf{v}_{13}\mathbf{v}_{23} & \mathbf{v}_{23} & \mathbf{u}_{13} & \mathbf{v}_{13} & \mathbf{1} \\ \mathbf{u}_{14}\mathbf{u}_{24} & \mathbf{v}_{14}\mathbf{u}_{24} & \mathbf{u}_{24} & \mathbf{u}_{14}\mathbf{v}_{24} & \mathbf{v}_{14}\mathbf{v}_{24} & \mathbf{v}_{24} & \mathbf{u}_{14} & \mathbf{v}_{14} & \mathbf{1} \\ \mathbf{u}_{15}\mathbf{u}_{25} & \mathbf{v}_{15}\mathbf{u}_{25} & \mathbf{u}_{25} & \mathbf{u}_{15}\mathbf{v}_{25} & \mathbf{v}_{15}\mathbf{v}_{25} & \mathbf{v}_{25} & \mathbf{u}_{15} & \mathbf{v}_{15} & \mathbf{1} \\ \mathbf{u}_{16}\mathbf{u}_{26} & \mathbf{v}_{16}\mathbf{u}_{26} & \mathbf{u}_{26} & \mathbf{u}_{16}\mathbf{v}_{26} & \mathbf{v}_{16}\mathbf{v}_{26} & \mathbf{v}_{26} & \mathbf{u}_{16} & \mathbf{v}_{16} & \mathbf{1} \\ \mathbf{u}_{17}\mathbf{u}_{27} & \mathbf{v}_{17}\mathbf{u}_{27} & \mathbf{u}_{27} & \mathbf{u}_{17}\mathbf{v}_{27} & \mathbf{v}_{17}\mathbf{v}_{27} & \mathbf{v}_{27} & \mathbf{u}_{17} & \mathbf{v}_{17} & \mathbf{1} \\ \mathbf{u}_{18}\mathbf{u}_{28} & \mathbf{v}_{18}\mathbf{u}_{28} & \mathbf{u}_{28} & \mathbf{u}_{18}\mathbf{v}_{28} & \mathbf{v}_{18}\mathbf{v}_{28} & \mathbf{v}_{28} & \mathbf{u}_{18} & \mathbf{v}_{18} & \mathbf{1} \end{bmatrix} \begin{bmatrix} F_{11} \\ F_{12} \\ F_{13} \\ F_{21} \\ F_{22} \\ F_{23} \\ F_{31} \\ F_{32} \\ F_{33} \end{bmatrix} = \mathbf{0}$$
